A Troublesome Inheritance Nicholas Wade,2014-05-06 Drawing on startling new evidence from the mapping of the genome an explosive new account of the genetic basis of race and its role in the human story Fewer ideas have been more toxic or harmful than the idea of the biological reality of race and with it the idea that humans of different races are biologically different from one another For this understandable reason the idea has been banished from polite academic conversation Arguing that race is more than just a social construct can get a scholar run out of town or at least off campus on a rail Human evolution the consensus view insists ended in prehistory Inconveniently as Nicholas Wade argues in A Troublesome Inheritance the consensus view cannot be right And in fact we know that populations have changed in the past few thousand years to be lactose tolerant for example and to survive at high altitudes Race is not a bright line distinction by definition it means that the more human populations are kept apart the more they evolve their own distinct traits under the selective pressure known as Darwinian evolution For many thousands of years most human populations stayed where they were and grew distinct not just in outward appearance but in deeper senses as well Wade the longtime journalist covering genetic advances for The New York Times draws widely on the work of scientists who have made crucial breakthroughs in establishing the reality of recent human evolution The most provocative claims in this book involve the genetic basis of human social habits What we might call middle class social traits thrift docility nonviolence have been slowly but surely inculcated genetically within agrarian societies Wade argues These values obviously had a strong cultural component but Wade points to evidence that agrarian societies evolved away from hunter gatherer societies in some crucial respects Also controversial are his findings regarding the genetic basis of traits we associate with intelligence such as literacy and numeracy in certain ethnic populations including the Chinese and Ashkenazi Jews Wade believes deeply in the fundamental equality of all human peoples He also believes that science is best served by pursuing the truth without fear and if his mission to arrive at a coherent summa of what the new genetic science does and does not tell us about race and human history leads straight into a minefield then so be it This will not be the last word on the subject but it will begin a powerful and overdue conversation

The Exploitation of Mammal Populations V.J. Taylor, N. Dunstone, 1996-08-31 Human exploitation of other mammals has passed through three historical phases distinct in their ecological significance though overlapping in time Initially Homo sapiens was a predator particularly of herbivores but also of fur bearing predators From about 11 000 years ago goats and sheep were domesticated in the Middle East rapidly replacing gazelles and other game as the principal source of meat The principal crops including wheat and barley were taken into agriculture at about the same time and the resulting Neolithic farming culture spread slowly from there over the subsequent 10 500 years In a few places such as Mexico Peru and China this Middle Eastern culture met and merged with agricultural traditions that had made a similar but independent transition These agricultural traditions provided the essential support for the industrial revolution and for a third phase of industrial exploitation of mammals In this chapter these themes are drawn out and their ecological significance is investigated Some of the impacts of humans on other mammals require consideration on a world wide basis but the chapter concentrates parochially on Great Britain What have been the ecological consequences of our exploitation of other mammals
