Theory and Design of Adaptive Filters John R. Treichler, C. Richard Johnson, Michael G. Larimore, 2001 Rather than superficially examining an extensive list of possible applications benefiting from adaptive filter use the authors examine four such problems in detail and review the common attributes that are shared with many other applications of adaptive filtering The authors develop the basic rules and algorithms for filter performance and provide tools for design along with an appreciation of the complexity of behavioral analysis Derivations and convergence discussions are kept to a basic level The presentation focuses on a few principles and applies them to a series of motivating examples that include in depth discussion of implementation aspects for filter design not found in other books Serves as a valuable reference for practicing engineers

Adaptive Filtering Paulo S. R. Diniz, 2008-05-22 This book presents the basic concepts of adaptive signal processing and adaptive filtering in a concise and straightforward manner using clear notations that facilitate actual implementation Important algorithms are described in detailed tables which allow the reader to verify learned concepts The book covers the family of LMS and algorithms as well as set membership sub band blind IIR adaptive filtering and more The book is also supported by a web page maintained by the author

Principles of Adaptive Filters and Self-learning Systems Anthony Zaknich, 2005-04-25 Teaches students about classical and nonclassical adaptive systems within one pair of covers Helps tutors with time saving course plans ready made practical assignments and examination guidance The recently developed practical sub space adaptive filter allows the reader to combine any set of classical and or non classical adaptive systems to form a powerful technology for solving complex nonlinear problems

Complex Valued Nonlinear Adaptive Filters Danilo P. Mandic, Vanessa Su Lee Goh, 2009-04-20 This book was written in response to the growing demand for a text that provides a unified treatment of linear and nonlinear complex valued adaptive filters and methods for the processing of general complex signals circular and noncircular It brings together adaptive filtering algorithms for feedforward transversal and feedback architectures and the recent developments in the statistics of complex variable under the powerful frameworks of CR Wirtinger calculus and augmented complex statistics This offers a number of theoretical performance gains which is illustrated on both stochastic gradient algorithms such as the augmented complex least mean square ACLMS and those based on Kalman filters This work is supported by a number of simulations using synthetic and real world data including the noncircular and intermittent radar and wind signals

A Rapid Introduction to Adaptive Filtering Leonardo Rey Vega, Hernan Rey, 2012-08-07 In this book the authors provide insights into the basics of adaptive filtering which are particularly useful for students taking their first steps into this field They start by studying the problem of minimum mean square error filtering i e Wiener filtering Then they analyze iterative methods for solving the optimization problem e g the Method of Steepest Descent By proposing stochastic approximations several basic adaptive algorithms are derived including Least Mean Squares LMS Normalized Least Mean Squares NLMS and Sign error algorithms The authors provide a general framework to study the stability and steady state performance of these algorithms The affine Projection Algorithm APA which provides faster convergence at the expense of computational complexity although fast implementations can be used is also presented In addition the Least Squares LS method and its recursive version RLS including fast implementations are discussed The book closes with the discussion of several topics of interest in the adaptive filtering field

Adaptive Filters and Equalisers Bernard Mulgrew, Colin F. Cowan, 1988-08-31 The work presented in this text relates to research work in the general area of adaptive filter theory and practice which has been carried out at the Department of Electrical Engineering University of Edinburgh since 1977 Much of the earlier work in the department was devoted to looking at the problems associated with the physical implementation of these structures This text relates to research which has been undertaken since 1984 which is more involved with the theoretical development of adaptive algorithms The text sets out to provide a coherent framework within which general adaptive algorithms for finite impulse response adaptive filters may be evaluated It further presents one approach to the problem of finding a stable solution to the infinite impulse response adaptive filter problem This latter objective being restricted to the communications equaliser application area The authors are indebted to a great number of people for their help guidance and encouragement during the course of preparing this text We should first express our appreciation for the support given by two successive heads of department at Edinburgh Professor J H Collins and Professor J Mavor The work reported here could not have taken place without their support and also that of many colleagues principally Professor P M Grant who must share much of the responsibility for instigating this line of research at Edinburgh

Adaptive Filtering Lino Garcia Morales, 2011-09-06 Adaptive filtering is useful in any application where the signals or the modeled system vary over time. The configuration of the system and in particular the position where the adaptive processor is placed generate different areas or application fields such as prediction system identification and modeling equalization cancellation of interference etc which are very important in many disciplines such as control systems communications signal processing acoustics voice sound and image etc. The book consists of noise and echo cancellation medical applications communications systems and others hardly joined by their heterogeneity. Each application is a case study with rigor that shows weakness strength of the method used assesses its suitability and suggests new forms and areas of use. The problems are becoming increasingly complex and applications must be adapted to solve them. The adaptive filters have proven to be useful in these environments of multiple input output variant time behaviors and long and complex transfer functions effectively but fundamentally they still have to evolve. This book is a demonstration of this and a small illustration of everything that is to come.
