Earth's Dynamic Systems William Kenneth Hamblin, Eric H. Christiansen, 2004 There are two major pathways for the flow of energy and matter on Earth 1 the hydrologic system the circulation of water over Earth's surface and through its atmosphere powered by energy from the Sun and 2 the tectonic system the movement of material powered by heat from Earth's interior These two unifying themes form the backbone of Earth's Dynamic Systems providing a logical well crafted spectacularly illustrated introduction to physical geology **NEW TO THIS EDITION** GeoLogic Geologists have a unique way of reading the landscape and rocks These essays illustrate in words and images how modern geologists interpret the world around us Updated and Enhanced Student CD ROM Includes dozens of high quality animations photographs and videos Guided Tours These animated tours of Earth's major landforms illustrate key concepts in a way the printed word and still pictures cannot Slideshows Written and photographed by the authors the slideshows expand on the text with additional photographs and explanations Videos and animations Gathered from geologists around the world these illustrate both fundamental concepts and how modern geologists study Earth

Mathematical Modeling of Earth's Dynamical Systems Rudy Slingerland, Lee Kump, 2011-03-28 A concise guide to representing complex Earth systems using simple dynamic models Mathematical Modeling of Earth's Dynamical Systems gives earth scientists the essential skills for translating chemical and physical systems into mathematical and computational models that provide enhanced insight into Earth's processes Using a step by step method the book identifies the important geological variables of physical chemical geoscience problems and describes the mechanisms that control these variables This book is directed toward upper level undergraduate students graduate students researchers and professionals who want to learn how to abstract complex systems into sets of dynamic equations It shows students how to recognize domains of interest and key factors and how to explain assumptions in formal terms The book reveals what data best tests ideas of how nature works and cautions against inadequate transport laws unconstrained coefficients and unfalsifiable models Various examples of processes and systems and ample illustrations are provided Students using this text should be familiar with the principles of physics chemistry and geology and have taken a year of differential and integral calculus Mathematical Modeling of Earth's Dynamical Systems helps earth scientists develop a philosophical framework and strong foundations for conceptualizing complex geologic systems Step by step lessons for representing complex Earth systems as dynamical models Explains geologic processes in terms of fundamental laws of physics and chemistry Numerical solutions to differential equations through the finite difference technique A philosophical approach to quantitative problem solving Various examples of processes and systems including the evolution of sandy coastlines the global carbon cycle and much more Professors A supplementary Instructor's Manual is available for this book It is restricted to teachers using the text in courses For information on how to obtain a copy refer to http://press.princeton.edu/class_use/solutions.html

Earth Frank H. T. Rhodes, 2012-06-15 It's impossible to grasp the whole planet or integrate all the descriptions of it But because we live here we have to try This is not just an artistic compulsion or an existential yearning still less an academic exercise It's a survival issue This is the only planet we have We're stuck here and we don't own the place it would be the height of arrogance to assume that we do We're tenants here not owners but we're tenants with hope for a long term tenancy We want to extend our lease just as far as we can from Earth A Tenant's Manual In Earth A Tenant's Manual the distinguished geologist Frank H T Rhodes President Emeritus of Cornell University provides a sweeping accessible and deeply informed guide to the home we all share showing us how we might best preserve the Earth's livability for ourselves and future generations Rhodes begins by setting the scene for our active planet and explaining how its location and composition determine how the Earth works and why it teems with life He emphasizes the changes that are of concern to us today from earthquakes to climate change and the clashes over the energy resources needed for the Earth's exploding population He concludes with an extended exploration of humanity's prospects on a complex protean and ultimately finite world It is not a question of whether the planet is sustainable the challenge facing life on Earth and the life of the Earth is whether an expanding and high consumption species like ours is sustainable Only new resources new priorities new policies and most of all new knowledge can reverse the damage that humanity is doing to our home and ourselves A sustainable human future Rhodes concludes in this eloquent sobering but ultimately optimistic book will require a sense of responsible stewardship for we are not owners of this planet we are tenants Surveying the systems large and small that govern Earth's processes and influence its changes Rhodes addresses the negative consequences of human activities for the health of its regulatory systems but offers practical suggestions as to how we might effect repairs or at least limit further damage to our home
